JOB AID

COMPLETING MALARIA INDICATORS ON THE MONTHLY OPD MORBIDITY FORMS

Variable	Source document	How to compute the variable
Number of suspected malaria cases	Consulting room register	This is counted as all malaria cases recorded in PROVISIONAL DIAGNOSIS column of the consulting room register.
Number of suspected uncomplicated malaria cases	Consulting room register/lab register	This is counted as the number of suspected malaria cases tested for malaria using either RDTs or microscopy. In the CRR, it is counted from the REFERRED FOR TESTING column, whereas from the lab register, it is counted from the RDT and microscopy column.
Number of suspected uncomplicated malaria cases tested positive	Consulting room register/lab register	This is counted as the number of suspected malaria cases testing positive using either RDTs or microscopy. In the CRR, it is counted from the TEST RESULTS column, whereas from the lab register, it is counted from the RDT and microscopy results column.
Suspected uncomplicated malaria cases not tested but treated	Consulting room register	This is counted as all suspected malaria cases that were not tested but treated as malaria. It is the sum of all malaria cases diagnosed and documented in the PRINCIPAL/FINAL/ADDITIONAL DIAGNOSIS columns without any test requested.
